

Cagrilinitide Reconstitution & Dosing

Cagrilintide binds to the amylin receptors in the brain, which helps modulate appetite and enhance feelings of fullness or satiety. By slowing gastric emptying, it prolongs the duration food stays in the stomach, contributing to reduced caloric intake.

WEEK	DOSE	UNITS
Cagrilinitide 10mg BAC Water: 2ml (200 units)		
WEEK 1-4	0.3mg	6
WEEK 5-8	0.6mg	12
WEEK 9-12	1.2mg	24
